

VENTURA COUNTY FIRE DEPARTMENT LIVE FUEL MOISTURE 2025 ALL FUEL BEDS - CHAMISE

Fuels/Fire Discussion

- As warm and dry conditions continue, fire potential will steadily trend towards more typical summer levels. Fuels are still recovering from recent cool and humid weather, and with a lack of lightning or extreme heat, fire potential will still run a little below normal the next several days, but a large fire will be possible any day on well-aligned starts.
- Dead fuel moistures will gradually decrease through early next week, with 1 and 10 hour fuels highly receptive during the daytime burn periods but more recovery time needed in some areas for heavier fuels to become more receptive.
- Initial attack activity, which has been unusually light of late, will likely trend towards moderate levels over the next several days with the warmer and drier weather.
